The 'Bit List' of Digitally Endangered Species

The DPC's 'Bit List' of Digitally Endangered Species is a crowd-sourcing exercise to discover which digital materials our community thinks are most at risk, as well as those which are relatively safe thanks to digital preservation. By compiling and maintaining this list over the coming years, the DPC aims to celebrate great digital preservation endeavors as entries become less of a 'concern,' whilst still highlighting the need for efforts to safeguard those still considered 'critically endangered.'

Click on each of the Risk Classifications to see the entries for each category.

LOWER RISK

Digital materials are listed as *Lower Risk* when it does not meet the requirements for other categories but where there is a distinct preservation requirement. Failure or removal of the preservation function would result in re-classification to one of the threatened categories.

VULNERABLE

Digital materials are listed as *Vulnerable* when the technical challenges to preservation are modest but responsibility for care is poorly understood, or where the responsible agencies are not meeting preservation needs. This classification includes *Lower Risk* materials in the presence of aggravating conditions.

ENDANGERED

Digital materials are listed *Endangered* when they face material technical challenges to preservation or responsibility for care is poorly understood, or where the responsible agencies are poorly equipped to meet preservation needs. This classification includes *Vulnerable* materials in the presence of aggravating conditions.
