# Agenda

- Overview of social media data and APIs
- Twitter's API
- Walk-through of Social Feed Manager
- More tools for collecting social media data
- Ethical, legal, and privacy considerations
- Collections at GW Libraries

# Social media on the web

A large background image showing Theresa May smiling and interacting with a group of children in what appears to be a school or community setting.

# APIs and JSON

Collecting social media content  
(typically) involves

using the platform's API

to get posts as JSON

# What's an API?

- Short for **Application Programming Interface**
- Intended for *software* to interact with a website
  - vs. a web interface, designed for *people* to interact with a web site.
- API calls consist of:
  - request: `http://an.api.com/somerequest?foo=15`
  - response: structured data, e.g., XML or JSON

Why not just use  
**Web Scrapping?**

# Why not just use Web Scraping?

- It's hard
- It's fragile
- It's incomplete

Or maybe traditional  
**Web Archiving?**

But using the **API**...

# Using an API for collecting social media data

- Generally gives you exactly what the platform stores.
- Can give you useful slices of data you can't get by any amount of scraping.
- Gives you social media data in **structured** format, which makes it easy to analyze as data.

# JSON - JavaScript Object Notation

- `{ key: value, key: value... }`
- keys are strings
- a value may be:
  - string - in quotes: `"GW"`
  - number
  - boolean - `true` or `false`
  - another JSON object
  - array (denoted by square brackets `[ ]`) of JSON objects
  - `null`

# JSON example

```
{ 'title': 'Social Media Archiving',  
  'logistics':  
    { 'datetime_utc': '2018-12-06 14:30:00',  
      'duration_hrs': 1,  
      'location': 'Webex' },  
  'awesome': true,  
  'wine_list': [],  
  'presenters': ['Laura Wrubel',  
                 'Dan Kerchner']  
}
```

# Tweets are JSON too

- Twitter's guide to the structure of a tweet:  
<https://developer.twitter.com/en/docs/tweets/data-dictionary/overview/tweet-object>
- Let's look at an example...

<https://twitter.com/gwucolumbian/status/1069267199318216704>

# Most useful API methods for collecting tweets

- User timeline: GET statuses/user\_timeline
- Search: GET search/tweets
- Filter stream: POST statuses/filter
- Sample stream

More: <https://developer.twitter.com/en/docs>

# Geotagging

- When posting a tweet:
  - Geotagging is opt-in. **Only ~2% geotagged.**
  - Lat, long or place name (e.g., DC or Middle Earth)
- API support:
  - Search API: Limit to a specified distance of a lat, long.
  - Filter Stream: Limit to a bounding box.

# Social Feed Manager walkthrough

**Social Feed Manager** empowers researchers and archivists to build collections of social media data from multiple platforms.

## Log In

If you have not created an account yet, then please [sign up](#) first.

### Username

### Password

[Forgot your password?](#)

☐ Remember me

Log in

Social Feed Manager empowers researchers and archivists to create collections of social media data from Twitter, Tumblr, Flickr, and Sina Weibo. Read more about Social Feed Manager [here](#).

Collecting and using data from social media platforms is subject to those platforms' terms ([Twitter](#), [Flickr](#), [Sina Weibo](#), [Tumblr](#)), as you agreed to them when you created your social media account. Social Feed Manager respects those platforms' terms as an application ([Twitter](#), [Flickr](#), [Sina Weibo](#), [Tumblr](#)).

Social Feed Manager provides data to you for your research and academic use. Social media platforms' terms of service **generally do not allow republishing of full datasets**, and you should refer to their terms to understand what you may share. Authors typically retain rights and ownership to their content.

In addition to respecting the platforms' terms, as a user of Social Feed Manager and data collected within it, it is your responsibility to consider the ethical aspects of collecting and using social media data. Your discipline or professional organization may offer guidance. Here are some [ethical and privacy guidelines](#) you may want to consider.

# Credentials

### This application will be able to:

- Read Tweets from your timeline.
- See who you follow.

### Will not be able to:

- Follow new people.
- Update your profile.
- Post Tweets for you.
- Access your direct messages.
- See your email address.
- See your Twitter password.

# Collection Sets

A collection set is a group of collections around a particular topic or theme. Collections sets are active when there is at least one active collection within them. Collection sets are inactive when all collections have been deactivated and are no longer harvesting.

Active 0

Shared 4

No corresponding collection sets.

[Add Collection Set](#)

# Collection Sets

A collection set is a group of collections around a particular topic or theme. Collections sets are active when there is at least one active collection within them. Collection sets are inactive when all collections have been deactivated and are no longer harvesting.

# Infrastructure

- SFM:
  - Production
  - Sandbox: For instruction and experimentation.
  - Amazon Web Services instances for special uses.
- Access is restricted to GW network.
- Currently using 5TB out of 6TB storage

# Infrastructure: Challenges

- Skills
- Storage Space
- Updates / Keeping up with API changes

# More tools for collecting social media data

- DocNow tools:
  - twarc: command-line tools for collecting from Twitter, with a suite of utilities for visualization and processing.
  - Hydrator: desktop app which will get the full tweet metadata for a list of tweet identifiers  
(watch for more in the [second phase of their Mellon grant](#))
- [TAGS](#): Google Sheet for quick and dirty collecting.
- Commercial tools

[Great list from IIPC of more tools.](#)

[DocNow Slack](#), for getting advice from the community.

# Commercial social media services

- Limitations of Twitter service providers may include:
  - A focus on marketing and business intelligence, not academic research.
  - Restricted data exports, often 50K tweets per day.
  - Analytics that are “black box” and may not be fit for academic research and archiving.
- Purchasing tweets can be pricey. Price depends on number of tweets and length of the time period.

# Techniques for collection development

- Search Twitter website.
- Identify hashtags with DocNow App.
- Extract accounts from Twitter lists.
- Extract hashtags / accounts from collections.
- Rely on existing lists
  - USNPL
  - U.S. Digital Registry (U.S. federal agencies)
  - Wikipedia
  - Ballotpedia

# Ethical considerations

# Social media data comes from people

- Consider impact of your work on the creator of the social media.
- Do not have creator's permission for research.
- Impact on creator is balanced against public good of your research.
- Requires judgement call.

Social media research ethical and privacy guidelines at GW

“Participant’ Perceptions of Twitter Research Ethics.” Casey Fiesler, Nicholas Proferes, *Social Media + Society*.  
First published March 10, 2018. [doi.org/10.1177/2056305118763366](https://doi.org/10.1177/2056305118763366)

# Data collecting

Be thoughtful collecting social media of:

- Vulnerable individuals (e.g., minors, social activists)
- Sensitive or harmful topics (e.g., questionable behavior, mental illness)
- Geography-based collecting

# Publishing

- When possible, get permission from creator for quotes from social media.
- Do not rely on anonymizing posts.
- Respect a user's deleting content.

# Data sharing

- Get familiar with platform terms of use.
  - Don't republish full datasets
  - Share in accordance with terms (e.g., tweet ids only)
  - Consider copyright
- Sharing summary statistics is usually OK.

## Documenting the Now White Paper on Ethics

1. Archivists should engage and work with the communities they wish to document.
2. Documentation efforts must go beyond what can be collected without permission from the web and social media.
3. Archivists should follow social media platforms' terms of service where they are congruent with the values of the communities they are attempting to document.
4. When possible, archivists should apply traditional archival practices such as appraisal, collection development, and donor relations to social media and web materials.

# Collecting at GW

- Performed primarily by SFM team.
- Attempt to collect on topics related to GW's research strengths.
- Have experimented collaborating with subject librarians.
- Consultations rather than self-service.
- Informed by “Building Social Media Archives: Collection Development Guidelines”

# Example collections

- GWU-related collecting (collecting from our own community, official accounts)
- 2016 and 2018 U.S. election:s general hashtags, Democrat hashtags, GOP hashtags, candidate accounts
- Hurricanes and natural disasters
- U.S. government accounts
- News organizations
- Climate change
- Members of Congress

## DIGITAL DECAY?

Tracing Change Over Time Among  
English-Language Islamic State  
Sympathizers on Twitter

Audrey Alexander  
October 2017

Program on Extremism  
THE GEORGE WASHINGTON UNIVERSITY

### Tweet Frequency and Unique Screen Names By Week

(Figure 5) This graph shows how the relationship between unique screen names and tweet frequency per week changed over the course of the 65-week period. As discussed in the method chapter, this graph, like several others in the study, uses square root in the y-axis to more clearly represent the relationship between the two variables.

of activity' is quantified by the number of days between an account's first and last tweet. Twitter's API does not discern the date or time at which the company suspends accounts, nor does it identify accounts that were created and then subsequently abandoned by their respective users. Consequently, this measurement allows the study to grasp the chronological span of sympathizers that actively use the platform to share content. While overwhelmingly skewed by outliers, the average lifespan for this sample of English-language pro-IS accounts on Twitter was 251 days. It is critical to note, however, that dispersion of lifespan is highly concentrated (see Figure 6). Approximately 51.7 percent of accounts did not remain active longer than 50 days. On the other hand, however, a substantive portion of accounts lasted over a year, suggesting that Twitter's attempts to detect and suspend pro-IS account may be missing some long-term users. One possible explanation for long-standing users relates to the data collection method, as researchers are more likely to identify accounts the longer they are open.<sup>13</sup> Ultimately, accounts that opted to leave the platform are likely included in this breakdown, although multiple factors—including the threat of suspension—likely affect user activity in this regard.

In order to maintain their presence on Twitter, some English language IS sympathizers appeared to have created multiple accounts at the same time to avoid shutdowns. On February 17, 2016, for example, four separate accounts were

fashioned from a core handle,<sup>14</sup> possibly from the same individual. One account (@erhabi35) survived only eight days, whereas another account (@Erhabi39) stayed active for 62 days. Although the study attempted to annotate cases where the same individual controlled multiple accounts, as the trend is common, quantitative figures are generally not reliable due to the relative anonymity Twitter affords users. It is hard to ascertain whether users that demonstrate similar behavioral patterns are simply individuals attempting to inoculate their digital presence against suspensions or are

### Duration of Account Activity

(Figure 6) This chart depicts the duration of account activity, meaning the number of days a pro-IS Twitter account was active, and displays the breakdown in percentages.

### Twitter Makes It Worse: Political Journalists, Gendered Echo Chambers, and the Amplification of Gender Bias

Nikki Usher<sup>1</sup>, Jesse Holcomb<sup>2</sup>, and Justin Littman<sup>3</sup>

#### Abstract

Given both the historical legacy and the contemporary awareness about gender inequity in journalism and politics as well as the increasing importance of Twitter in political communication, this article considers whether the platform makes some of the existing gender bias against women in political journalism even worse. Using a framework that characterizes journalists' Twitter behavior in terms of the dimensions of their peer-to-peer relationships and a comprehensive sample of permanently credentialed journalists for the U.S. Congress, substantial evidence of gender bias beyond existing inequities emerges. Most alarming is that male journalists amplify and engage male peers almost exclusively, while female journalists tend to engage most with each other. The significant support for claims of gender asymmetry as well as evidence of gender silos are findings that not only underscore the importance of further research but also suggest overarching consequences for the structure of contemporary political communication.

### Populist communication by digital means: presidential Twitter in Latin America

Silvio Waisbord<sup>a</sup> and Adriana Amado<sup>b</sup>

<sup>a</sup>School of Media and Public Affairs, George Washington University, Washington, DC, USA; <sup>b</sup>Universidad de La Matanza, San Justo, Argentina

#### ABSTRACT

In this paper, we analyze the uses of Twitter by populist presidents in contemporary Latin America in the context of the debates about whether populism truly represents a revolution in public communication – that is, overturning the traditional hierarchical model in favor of popular and participatory communication. In principle, Twitter makes it possible to promote the kind of interactive communication often praised in populist rhetoric. It offers a flattened communication structure in contrast to the top-down structure of the traditional legacy media. It is suitable for horizontal, unmediated exchanges between politicians and citizens. Our findings, however, suggest that Twitter does not signal profound changes in populist presidential communication. Rather, it represents the continuation of populism's top-down approach to public communication. Twitter has not been used to promote dialogue among presidents and publics or to shift conventional practices of presidential communication. Instead, Twitter has been used to reach out the public and the media without filters or questions. It has been incorporated into the presidential media apparatus as another platform to shape news agenda and public conversation. Rather than engaging with citizens to exchange views and listen to their ideas, populists have used Twitter to harass critical journalists, social media users and citizens. Just like legacy media, Twitter has been a megaphone for presidential attacks on the press and citizens. It has provided with a ready-made, always available platforms to lash out at critics, conduct personal battles, and get media attention.

### Populism as communication style

Growing interest in the study of populism, media, and communication (Aalberg, Esser, Reinemann, Strömback, & de Vreese, 2017) inevitably confronts the long-standing fuzziness of the concept of populism. It is commonly acknowledged that 'populism' is perennially imprecise. Definitions have underscored different aspects as essential characteristics of populism, including economic policies, style of political leadership, political discourse, and ideology (Moffitt, 2016). Populism remains the subject of constant semantic squabbles, largely because it has taken various shapes across time and
